mit dem Titel

Small Countries in a highly complex World Economy – can they survive?

Abstract: *Global uncertainties are shaping the world; Crimean conflict freezes trade, the pressure of Isis is shaping geopolitical coalitions, the price of oil is dropping dramatically, 3D printed heart transplants and over 90 percent of the global fund management is run by automatic algorithms, that may fail at any moment.... National decision makers are making decisions in this environment of uncertainty. What makes a country fail or succeed in an increasingly volatile global system? Comparison of three countries, Korea, Finland and Austria will reveal some means of building or destroying resilience.*

Zeit: Dienstag, 30.06.2015, 17:00 Uhr
